

PGY2 Ambulatory Care

PGY2 pharmacy residency programs build on Doctor of Pharmacy (PharmD) education and PGY1 pharmacy residency programs to contribute to the development of clinical pharmacists in advanced or specialized practice. PGY2 residencies provide residents with opportunities to function independently as practitioners by conceptualizing and integrating accumulated experience and knowledge and incorporating both into the provision of patient care that improves medication therapy. Residents who successfully complete an accredited PGY2 pharmacy residency should possess competencies that qualify them for clinical pharmacist and/or faculty positions and position them to be eligible for attainment of board certification in ambulatory care.

The Ambulatory Care residency is designed to deepen the resident's understanding of both practice management and clinical skills necessary to successfully integrate ambulatory care pharmacy services into the healthcare system. The program emphasizes chronic disease management in the primary care setting while also allowing for experience in multiple specialty clinic areas. Service evaluation, creation/enhancement, and third-party reimbursement will be focus areas in each setting in which the resident rotates. The resident will have the opportunity to precept PharmD students in experiential situations and a combination of monthly block and longitudinal experiences will be utilized.

Application Requirements

The qualified applicant must possess a Doctor of Pharmacy Degree from an accredited college of pharmacy and must be eligible for Indiana licensure. Completion of a prior ASHP accredited PGY1 residency is required. All offers are contingent upon a background check, reference check, and preplacement health assessment, which includes a drug test. If selected for an on-site or virtual interview, completion of clinical case will be required.
