Post-Graduate Track: Neonatology

Riley Children’s Health delivers something that can’t be found anywhere else in Indiana.

As Neonatal Advanced Practice Providers are on the front lines of cutting-edge clinical care, education, research, and innovation. Riley’s 60-bed NICU is Indiana’s most advanced and only comprehensive Level IV NICU, providing the highest level of care available for the sickest, smallest and most complex newborns. As one of the nation’s leading healthcare networks, specifically for babies and children, our multidisciplinary team of neonologists, advanced practice providers, and pediatric specialists can deliver and coordinate healthcare for every baby because we have expertise in all areas of pediatric health.

Moreover, Riley is the only pediatric research hospital in the state, ranked among the top hospitals in the nation in eight categories of specialized healthcare for babies and children. Through enduring collaborations with the Indiana University School of Medicine, Indiana University School of Nursing and Indiana University School of Health and Rehabilitation Sciences, Riley Children's Health is one of the top 10 sites in the United States for pediatric health research, drawing millions of dollars in biomedical research investments each year.

In addition to the care provided at Riley, our Neonatology Department works with NICUs and birth hospitals across the state of Indiana to raise the standard of care provided to newborn patients. We work with researchers to continually improve outcomes and explore new treatment options.

In the state of Indiana, there is no other healthcare system more invested in maternal and neonatal health than Riley Children's Health. By 2020, Riley’s Maternity and Newborn Health Center will be up and running. This will be a comprehensive center that offers the highest level of maternity, fetal, and neonatal care in Indiana.
